Your task is to create a football information app supporting the following requirements:

- A splash screen will be shown when the app is launched. Use whatever image you want for the splash screen.

- The app's main screen will show a list of football teams. When a team is selected, the app will show:

    o The team's logo

    o Names of players in the team

    o A list of 10 (or fewer) upcoming matches for the team. You should show the name of the rival team, the date, and the competition (Champions League, Primera Division, etc.).

    o Each of the above should be shown in its own View, but all should be visible in the main screen. Use scrollbars if needed.

For this exercise, you should implement the app in Swift.

Football information is available from https://www.football-data.org/.

Design / implementation guidelines

1. You can use whichever packages/components you want.

2. You do not have to write tests.

3. Pay attention to clean code.

Good luck!
